Mit Java entwickeln und liefern: besser ohne Build & Deploy

Oder: Es liegt nicht an der Sprache

engacken auspacken ... Jel code Cen uz 'Kalaa Par, zuwenig intopon

ABAP?

ABAP!

SAP ECC ~ 238*10⁶ LoC

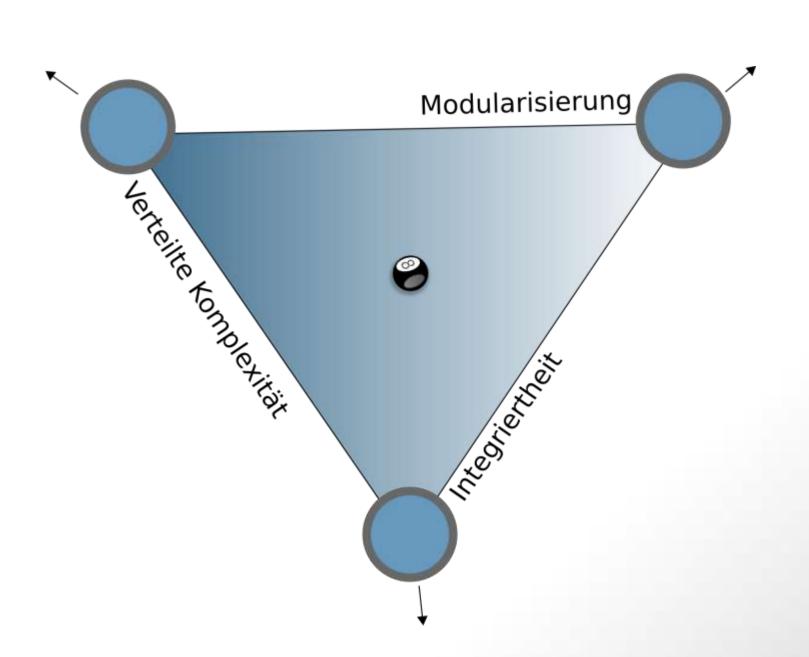

(http://de.wikipedia.org/wiki/Lines_of_Code)

Kundencode: Bis zu 6*10⁶ LoC

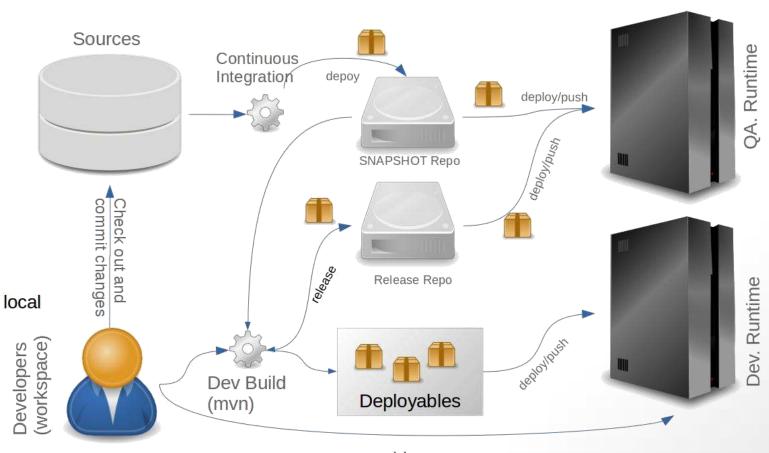

(http://scn.sap.com/community/abap/blog/2009/01/20/how-many-lines-of-custom-abap-code-are-inside-your-system)

Was passiert hier?

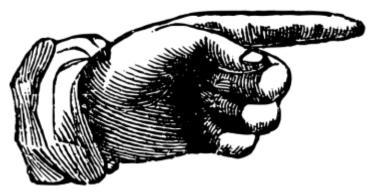

Huh?

debug

Please Notice This

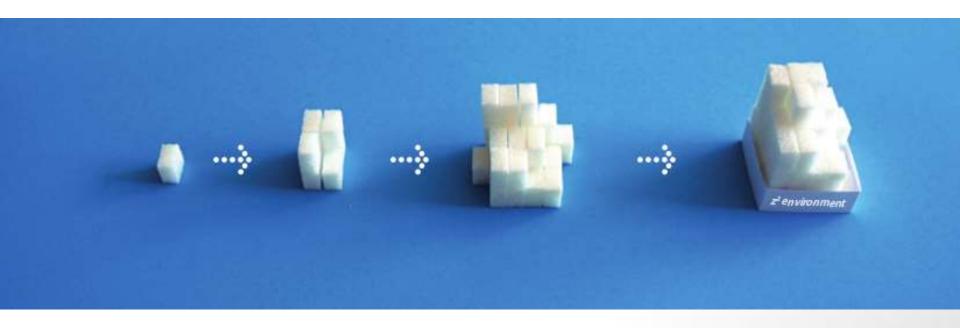

Kosten einer Änderung

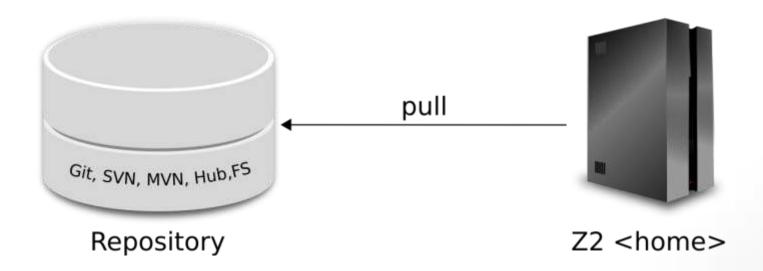

~

Anzahl der konfigurierbaren oder manuellen Schritte

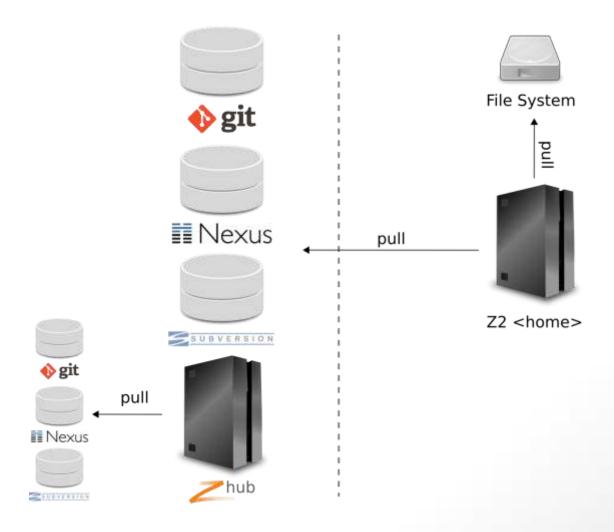

Gesucht: Produktiv bleiben bei steigender Komplexität und mit hinreichender Modularisierung

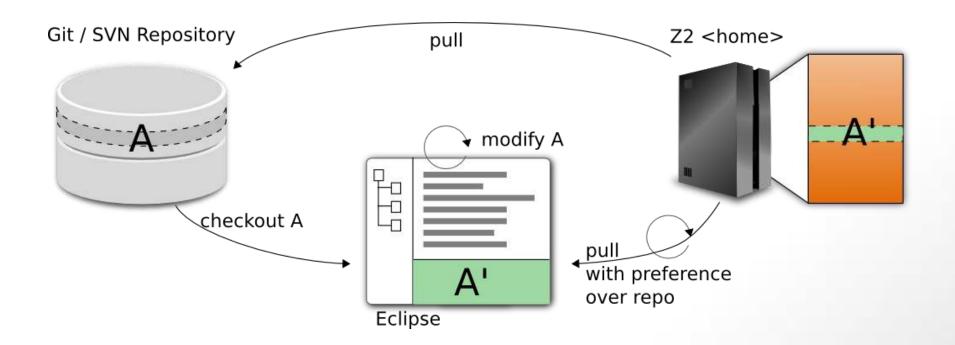

Z2 - Prinzip

Z2 - Quellen

Z2 - Entwicklung

<u>Für</u>

- Wachsende Lösungen / Websites
- Erweiterbarkeit wichtig
- Ständig gewartet
- Immer patchbar

Mit

- No-Deployment deployment pipeline
- Cloud Scale-Out
- Seamless Hadoop Map/Reduce

Keine Kompromisse

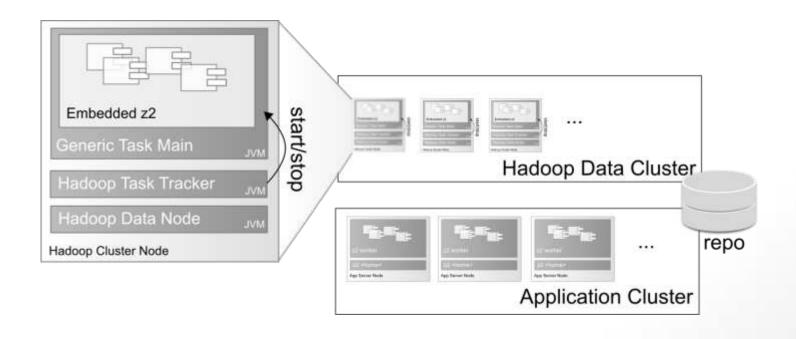

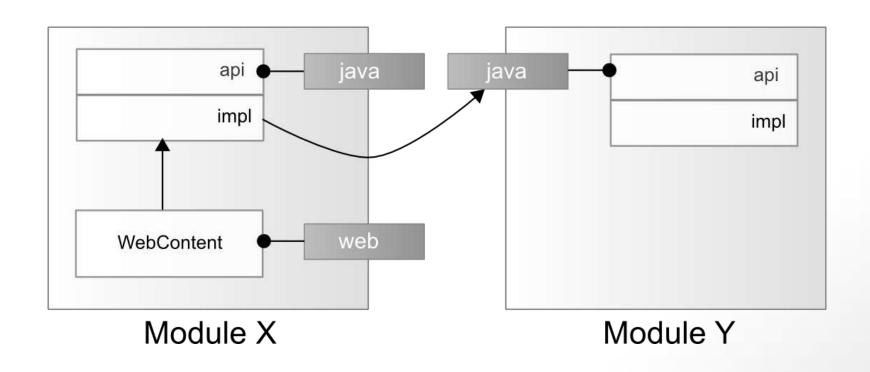

Bsp: Voll-integrierte Serverside UT

```
@RunWith(Z2UnitTestRunner.class)
@Z2UnitTest(
    componentName = "com.gi-de.tt.domain/java",
    dependencies = {"com.gi-de.tt.domain/applicationContext"}
@Configurable
@Transactional
public class SomeStuff {
    @Autowired private ProductRepository productRepository;
   @Test
    public void triggerDomainGC() {
        this.productRepository.purgeProductPropertyBinaryGarbage();
```

"Operational" Map/Reduce

Service-Modularisierung

Z2 ist Open Source aus Baden
